

The Control Modules **ELCSYS**

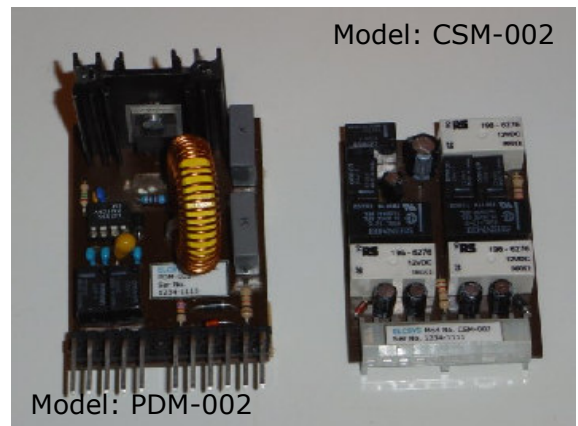

ELCSYS Appliance Control Module (Blind Control)

Relay logic controlled for reliability
Single button operation.
Turns on or off any fluorescent lighting or Appliance including opening or closing any electrically operated blinds, windows or doors.

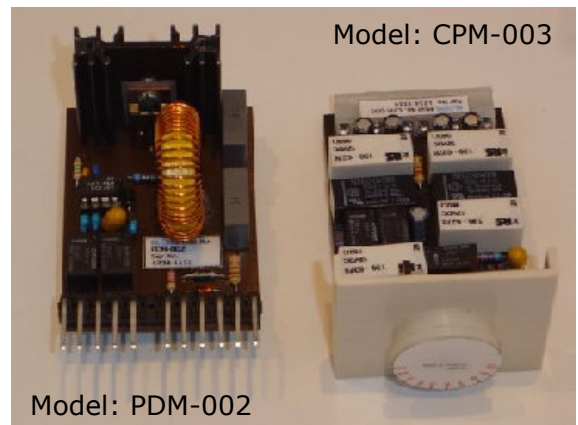

ELCSYS Standard Dimmer Control and Power Module

Relay logic controlled for reliability
Two button operation. One to turn on and off lights or ceiling fan with soft on and soft off control to the last used memory setting.
This operation will also turn on and off the indicator LED.
The other button can override lighting level to allow full dim up and dim down control.

ELCSYS Preset Dimmer Control and Power Modules

Relay logic controlled for reliability.
Two button operation. One to turn on and off lights or ceiling fan with soft on and soft off control to preset level.
This operation will also turn on and off the indicator LED.
The other button can override preset level to allow full dim up and dim down control.

ELCSYS Electro-Mechanical Dimmer Control Modules and Landing Light Control Module.

Electro-mechanical controlled for enhanced reliability and operates the same as described above.
The landing module has a single button operation for soft on to preset level. Soft off governed by the preset timer (1-12minutes).
Override feature to allow light level to go to full brightness for staircase cleaning etc. The LED Indicator is permanently lit enabling switch to be found in dark corridors.
